

Planr: The Blue Print

Planr: The Blue Print is a mobile productivity app designed to help users organize tasks, manage their time, and stay focused. The app combines task planning, progress tracking, reminders, and a built-in focus timer to support users as they work toward their goals.

I designed and developed Planr using **Flutter, Dart, Firebase, SharedPreferences, and Flutter Local Notifications**. The app includes task creation, task filtering, focus sessions, completion review, profile settings, dark mode, and local reminders.

The goal of this project was to create a clean, user-friendly productivity tool that helps users turn their plans into action. Through this project, I handled the full development process, including app planning, UI design, coding, testing, debugging, and release preparation for iOS and Android.

Skills demonstrated: Mobile app development, UI/UX design, Firebase integration, local data storage, notifications, state management, testing, and cross-platform deployment.
